patented rotating joint

Everything Ebnat makes has both flexibility and stability.

For its Swiss Move line, Ebnat Switzerland is bound by the pledges and obligations of its FSC® certification from the WWF Forest Stewardship Council.

FSC® is the only internationally-valid wood label. It stands for nature-orientated and socially-responsible forest cultivation and use of wood from our forests, which are checked on an ongoing basis and only remain profitable if regenerated. We do this for our native population, producers, consumers, plants and animals that depend on our forests.

With Ebnat you can deliver quality to your customers.

Your customers will be most enthusiastic. Swiss Move is simple, ingenious and practical. Thanks to the rotating, articulated joint, all cleaning work can be performed flexibly and efficiently, whilst also being kind to furniture – and to your back.

Our management system is certified according to ISO 9001/14001, enabling us to be able to offer you services and environmentally-aware products that are quality-tested.

As a company devoted to innovation, tradition and our region, we form part of Switzerland's tradition for precision.

modern and user-friendly

Typical Ebnat – simply genius!

With **Swiss Move**, movement has finally come into daily cleaning work. No more bending down, moving furniture or tiresome getting down on your knees... with the fixable and rotating handle, you can sweep up, down, around, and any which way.

Above all, innovations must be to the advantage of the user. This means using the tried and tested and creating optimal added value with good ideas. We've succeeded in doing this with the flexible, articulated handle joint - it's quite simply ingenious!

Turn the thread of floor brush, then the articulated joint opens and the handle becomes manoeuvrable. This enables you to sweep underneath furniture, crossways, in a circle, lengthways or at an angle. And, if you like, also quite normally. Turn the thread again, and the articulated joint becomes fixed and the handle holds firmly.

The scrubbing brush is similar. Thanks to automatic locking in place every 90 degrees, the scrubbing brush can be used with the head in both a longitudinal direction and in the original setting.

manoeuvrable and efficient

easy position changing of the scrubbing brush head thanks to 90-degree joint locking

there's almost nowhere you can't reach by opening the rotating articulated joint

Swiss beechwood and pure horsehair

practical and useful

scraper edge for stubborn dirt

demonstrably improved cleaning thanks to a double ring of soft bristles

the cotton cloth is held optimally on the scrubbing brush thanks to a simple cloth holder
