

Curve

Ergonomic and well-engineered

The Toothbrush «Curve» impresses with its puristic and ergonomic design. The TPE anti-slip surface with small Swiss crosses gives it a discreet character and underlines its distinctive design.

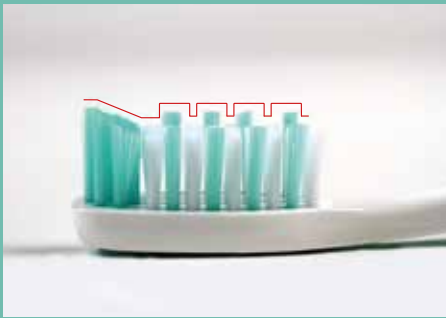

The flexible construction ensures gentle cleaning and perfect pressure sensitivity. The thumb and finger grooves ensure a safe guidance of the brush and a pleasant cleaning sensation.

The special stepped cut of «Curve», with bristle bundles of different heights, ensures thorough interdental care.

The practical «power tip» and the outer angle of the bristles clean the inner sides of your teeth as well as the rearmost molars particularly well.

«Curve» is available in three different degrees of hardness: soft, medium und hard.

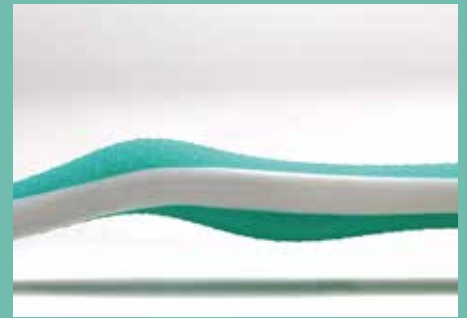

In addition, the tongue cleaner on the back of its head ensures an optimal cleaning result and a pleasant feeling of freshness.

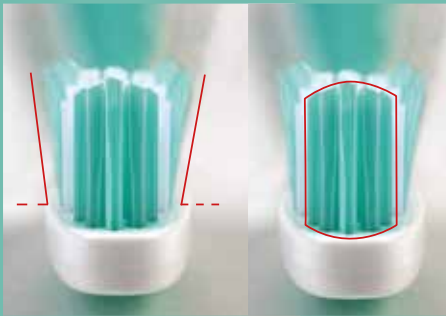

special stepped cut enables improved interdental care

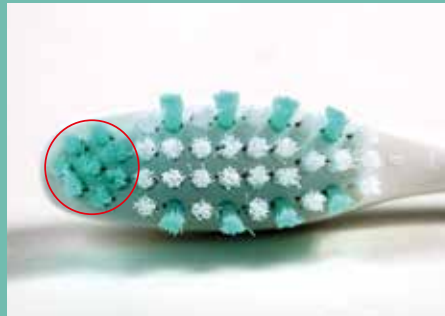

integrated tongue cleaner on the brush head

ergonomic groove for thumb and fingers

angled and straight bristles for optimal cleaning results

mix of bristle bundles, «power tip» and stepped cut

pleasant TPE anti-slip surface
