

bristles with round-end
for a gentle cleaning

two-row bristle-cut for optimal
cleaning around orthodontics

secure handling thanks to the ergo-
nomic thumb area on both sides

lightweight handle for
reliable control

Ebnat delivers orthodontic cleaning.

The new ebnatdent *elegance* was designed specifically with regard to ergonomics and an orthodontic cleaning effect:

The special two-row bristle field of the *elegance* toothbrush helps to remove food particles around orthodontics and is ideally suited for wearers of braces and implants.

Furthermore the short harder bristles optimize the cleaning of the dental enamel, while the long softer bristles effectively clean the interdental spaces and gently massage the gums.
