

# Charcoal

## For naturally white teeth

The «Charcoal» toothbrush promotes with its charcoal bristles the preservation of the natural white tooth colour.

The micro-carbon particles contained in the bristles reliably remove plaque and enhance the cleaning effect. They gently polish the tooth surface, protect the tooth enamel and brighten discolorations of red wine, tea or tobacco.

Additional coloured indicator bristles show when the toothbrush should be replaced by fading, ensuring optimal cleaning performance at all times.

The special multi-level shape optimises cleaning efficiency on tooth surfaces as well as in interdental spaces.

Thanks to the non-slip handle with nubbed thumb recess on both sides, targeted guidance is possible when brushing teeth. The ergonomic shape is particularly comfortable in the hand.

Like all Ebnat toothbrushes, the «Charcoal» was developed in cooperation with a Swiss university and tested for its cleaning performance.

micro-carbon bristles for gentle brightening of tooth discolouration

perfect cleaning results thanks to the multi-level cut

ergonomic 2-component grip for a comfortable cleaning movement

coloured indicator bristles show when it is time to change the toothbrush

non-slip handle with nubbed thumb stop on both sides
