

# Flexion

## Flexible and effective

The «Flexion» toothbrush is characterised by its flexibility and special design and provides a new brushing sensation.

The flexible 2-part brush head of the Flexion adjusts very conveniently to the shape of the dentition and the position of the teeth. Due to the flexible brush head, this toothbrush is particularly good for cleaning the insides of the dentition and the back molars.

The mix of sets of bristles and fan-like bristles, as well as the special layered cut facilitate optimal cleaning of both the tooth surfaces and the interdental spaces.

Due to the flexibility in the centre of the handle and in the area of the brush head, the pressure on the teeth and gums is balanced, thus preventing excessive scrubbing. The «Flexion» thus ensures effective and at the same time extremely gentle tooth cleaning.

The tongue cleaner on the back of the brush head provides an additional pleasant feeling of freshness.

Like all Ebnat toothbrushes, the «Flexion» was developed in cooperation with a Swiss university and tested for its cleaning performance.

flexible joint in the brush head

mix of fan-like bristles and sets of bristles

gentle cleaning thanks to flexible handle architecture

integrated tongue cleaner on the brush head

optimal positioning of the thumb on the TPE non-slip surface

area for individual embossing
