

Shorthead Premium

The new cleaning sensation

During the development of the «Shorthead Premium», special emphasis was placed on design, functionality and effectiveness.

The special design with the hole in the centre of the handle not only stands out visually from other toothbrushes, but also offers functional advantages. The thumb is ideally placed in the hole recess for secure guidance during the cleaning process. Additional grip is provided by the fine-textured surface of the TPE area. The elasticity of the material also optimally absorbs excessive pressure to the tooth surface.

The short, flat head has been designed to reach even the back molars with ease.

The mix of fan-like bristles and sets of bristles increase the cleaning efficiency and ensure optimal cleaning of the interdental spaces and tooth surfaces.

Like all Ebnat toothbrushes, the «Shorthead Premium» was developed in cooperation with a Swiss university and tested for its cleaning performance.

hole in the centre of the handle for optimal positioning

better accessibility due to short head

special, unique layered cut

mix of fan-like bristles and sets of bristles

flexible brush handle

area for individual embossing at the end of the handle
