

Tongue cleaner

Pleasantly thorough

Thanks to the two-sidedly applicable tongue cleaner first bacterial coating of the tongue is loosened and then removed.

The movable pads are deep cleaning and in the same time careful to the papillae of the tongue. The pads penetrate between the papillae, whereby the accumulation of bacteria and the coating are removed.

With the help of the back edge the coating is removed with gentle dragging moves.

The cleaning application remains pleasant and uncomplicated thanks to the extra-flat head section even at the back of the tongue.

In combination with a tooth gel, halitosis can be efficiently counteracted and a lasting pleasant feeling of freshness in the mouth can be ensured.

Developed in cooperation with the University Centre for Dentistry Basle (UCB).

the pad structure was developed explicitly for a gentle, deep cleaning massage

soft, movable pads loosen bacteria and coating between the papillae of the tongue

with the back edge the loosened coating can be removed

the pads on the middle of the back enhance the non-slip effect

extra flat head for a comfortable cleaning

the ergonomic handle fits perfectly in the hand when using both sides of the head
