

# ÜX – the Superbroom

## Clever and efficient

«ÜX» is without exception made from FSC® certified wood, recycled plastic, pure horsehair, coco and other natural materials. Quality and sustainability are the pillars of our product philosophy. Resource-saving raw materials and properly functioning brooms guarantee satisfied customers.

Traditionally, fine dirt is removed by pulling the broom, whilst tough dirt is easier to clean with pushing movements. With its patented handle joint, «ÜX» masters both tasks brilliantly.

A broad broom is used for large surfaces, whilst a small stiff brush is ideal for corners and places that are difficult

to reach. With its narrow and extra-dense brush head, «ÜX» manages to do both.

A hand brush is needed to clean up minor accidents or to brush swept up dirt onto the dustpan. With its ultra-shallow hand brush, which also boasts a handle joint, «ÜX» is capable of even more.

«ÜX – the Superbroom» provides evidence that excellent design can be both functional and effective.

The hard-wearing wooden handle and the lightweight metal handle are particularly well-suited for this product range.

The patented handle joint allows you to push and pull the broom.

Sustainability is our guiding principle, therefore Ebnat uses FSC® certified Swiss beech wood and recycled plastic for the «ÜX».

With the extra-narrow brush, cleaning places that are difficult to reach is child's play.

Pure horsehair is the preferred edging material for interior spaces, whilst coco is ideal for exterior application.

The dense press cut optimises the cleaning performance; the brush head also removes tough dirt in one sweep.
