

Wooden Toothbrush

Naturally one step ahead

The combination of wooden handle and nylon bristles combines naturalness and competence. The handle is made of high-quality, natural FSC® certified Swiss beech wood from the region. This is by nature non-slip and ensures safe handling during the cleaning process. Thanks to its shape, the toothbrush also fits comfortably in the hand.

As an additional option, the handle can be treated with a vegetable, mineral oil free wax. The toothbrush is therefore completely vegan.

The mineral oil free nylon bristles meet high dental hygiene requirements and therefore guarantee the desired oral hygiene. With the compact head all places in the mouth area are reached. Thanks to the dense punching, every tooth is optimally cleaned all around.

If desired, bristles can be used which consist of up to 100% biologically renewable raw materials.
