

X-Cut

Opposites with great effect

During the development of the «X-Cut», special emphasis was placed on design, functionality and effectiveness.

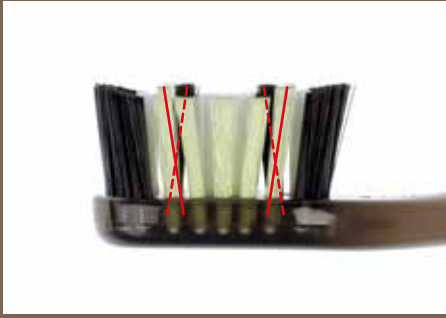

State-of-the-art manufacturing techniques enable an ideal combination of ergonomic design and top materials: every detail of this toothbrush is well thought-out and makes a meaningful contribution to daily dental care.

A thumb rest with a finely textured surface ensures the correct positioning of the fingers and the necessary grip when brushing the teeth. The elasticity of the material also optimally absorbs excessive pressure.

Thanks to the specially angled bristle cut and small brush head, even the back molars can be reached and cleaned effortlessly.

To increase the cleaning efficiency for interdental spaces and tooth surfaces, the unique stance with opposing bristle angles is used.

Like all Ebnat toothbrushes, the «X-Cut» was developed in cooperation with a Swiss university and tested for its cleaning performance.

special, opposing bristle angles for best cleaning results

non-slip handle with nubbled TPE surfaces on both sides

optimised bristle mix with gentle round end

short head for better accessibility of the back teeth

elastic, pressure-absorbing handle centre

area for individual embossing at the end of the handle
